

Polystone® Play-Tec In 12 colours available from stock

More freedom in design

Röchling Engineering Plastics offers the creative **Polystone® Play-Tec** sheets from stock in twelve colours.

Six single-coloured and six two-coloured (three-layer co-extruded) sheets are available from which we can make up an order according to your needs.

For you, this means shorter delivery times and greater flexibility when planning and designing your product.

Polystone® Play-Tec instead of wood

Polystone® Play-Tec is a homogeneous, coloured plastic sheet. Scratches are therefore almost invisible. The sheet does not absorb water, does not swell and does not delaminate. These properties make Polystone® Play-Tec the ideal choice for applications where painted or glazed plywood or MDF fibreboards have been used previously.

Typical applications

- Play and recreational equipment
- Kindergarten furniture and equipment
- Design elements
- Signs and displays
- Wellness and swimming pool equipment

Twelve colour variants provide flexibility:
Permanent designs are easily milled into the surface.

Passing the toy safety test with flying colours

Polystone® Play-Tec was tested by TÜV NORD CERT GmbH for compliance with DIN EN 71-3, -9, -10, -11. This standard regulates safety tests for toys, particularly with regard to the migration of toxic contents and organic-chemical compounds, which can be assimilated – following the way children usually behave. All the measurement results fall clearly short of the particular limiting values concerned.
